

BOURG BINDER BB3002 EVA/HOT MELT

BB3002 EVA/Hot melt

Fully automated binder

Fully supports JDF and XML workflows enabling automated job set-ups

**NEW** User-friendly Graphical user Interface (GUI)

Vibration of the jogger plate re-aligns the block of paper to be bound and guarantees high-quality job production

Superior milling and notching ensure deep glue penetration for maximum cover adhesion

Superior EVA / hot melt spine gluing for premier book binding

Adjustable side gluing (accuracy at 0,1 mm/0.004 in)

Highest quality knife creasing function

Extremely precise cover transport and positioning

Automatic barcode scanning for job tracking and to ensure job cover to content integrity (optional)

If you are looking for a perfect binder with excellent return-on-investment, the Bourg Binder BB3002 EVA is an ideal solution. Use it to produce a wide range of book sizes ranging from small square books to large custom sizes.

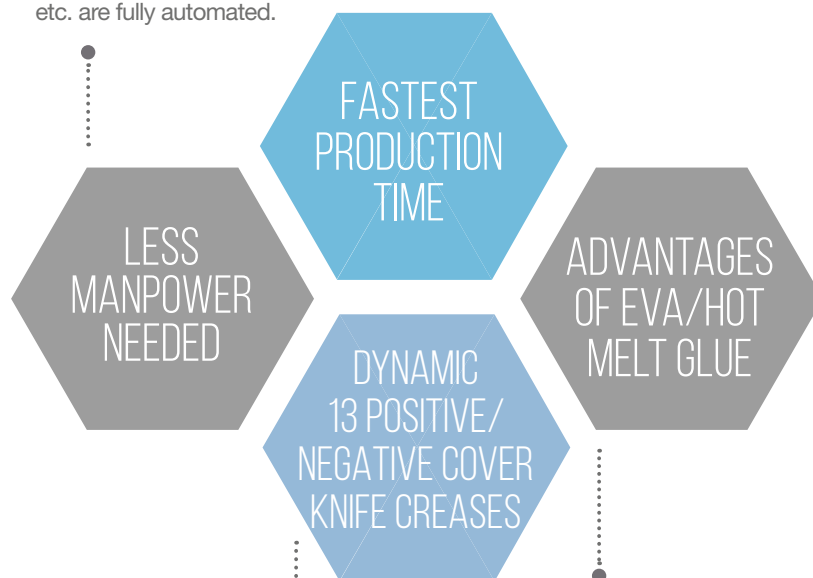

The BB3002 EVA is the ideal binder for on-demand customized applications and high quality materials such as student handouts and medical prescription books (with innerflaps/winged books and tear-off sheets) from 2 to 600 sheets (with 90 gsm) in record time.

As your needs grow, upgrade your BB3002 with our optional modules, like Bourg Book Loader (BBL) or a Bourg Book Complier (BBC). BB3002 is ready to adapt to your future workflow!

BB3002 EVA measures the book thickness specifications automatically and no manual input is required. All functions including the clamping system, the accuracy adjustment in operation, the barcode scanning, etc. are fully automated.

- Produce up to 350 books/hour (up to 650 cycles/hour) from 100 x 90 mm (3.93 x 3.54 in) to 385 x 380 mm (15.15 x 14.96 in) – the fastest production time for binders on the market.

Create a variety of flaps on the cover with our unique high-quality knife creasing function.

Knife creasing offers a superior and cleaner quality result, which avoids damage to the printed surface and cover cracking. Ideal for producing books with inner flaps (winged books).

- 1 Faster production of books.
- 2 Books can be manipulated immediately.
- 3 More economical than PUR; EVA can be remelted; no expiration date on the EVA glue.

IN-LINE
WITH BBCDUAL-MODE
WITH BSF

It has only been in a few a weeks but the binder BB3002 EVA is already making a significant difference thanks to an improved bind, plus an expansion to the services we can offer cost-effectively in-house. We wanted to add value to what we doing and so looked into offering wings on the covers of our perfect bound books and magazines. It is another string to our bow.

BOURG BINDER BB3002 PUR-COMPACT

BB3002 PUR-C

Fully automated binder

Fully supports JDF and XML workflows enabling automated job set-ups

**NEW** User-friendly Graphical user Interface (GUI)

Vibration of the jogger plate re-aligns the block of paper to be bound and guarantees high-quality job production

Superior milling and defibering ensure deep glue penetration for maximum cover adhesion

Quality PUR bound books

Glue capacity of 2 or 4 kg

Adjustable side gluing (accuracy at 0,1 mm/0.004 in)

Highest quality knife creasing function

Automatic barcode scanning for job tracking and to ensure job cover to content integrity (optional)

Choose the Bourg Binder BB3002 PUR-C to produce soft cover books and on-demand full-color printed books such as perfect bound photo books in a cost-effective way.

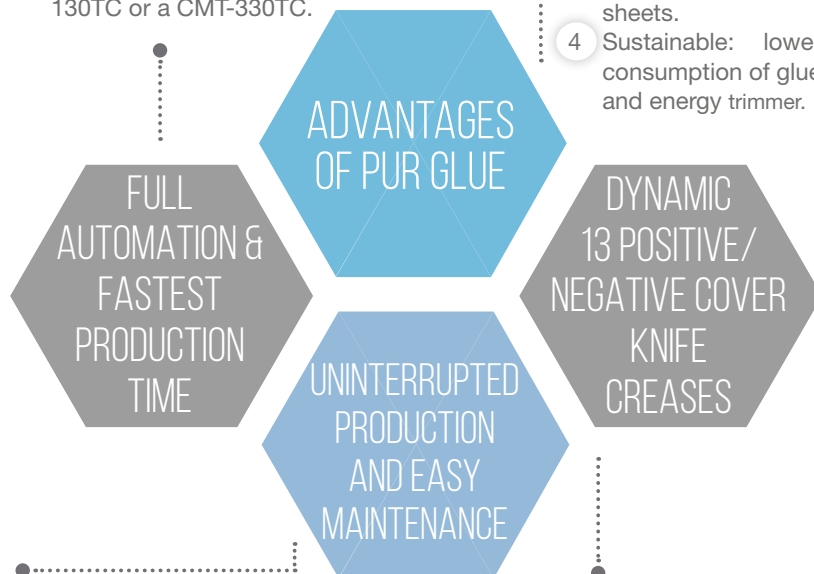

The combination of C.P. Bourg and Nordson technologies offers a consistent and reliable performance with precise dispensing of PUR adhesive glue, clean cut-off and the highest quality creasing, with increased productivity by reducing clean-up and shortening start-up/shutdown time.

For additional flexibility, you can use the BB3002 PUR-C also with EVA / hot melt glue.

The BB3002 PUR-C measures the book thickness specifications automatically and no manual input is required. Produce up to 285 books/hour (up to 650 cycles/hour) – the fastest production time for one clamp PUR binders on the market. For achieving maximum efficiency, add a Bourg Book Loader (BBL), a Bourg Book Compiler (BBC) and/or a trimmer CMT-130TC or a CMT-330TC.

- 1 Better finishing: lay flat book production.
- 2 Durable: more resistant to wear & tear.
- 3 Better application: for digitally printed silicone coated sheets.
- 4 Sustainable: lower consumption of glue and energy trimmer.

With the Nordson applicator the BB3002 PUR-C does not need to be stopped for refilling or constant cleaning. Just empty the purge cup when you start the machine.

Create a variety of flaps on the cover with our unique high-quality knife creasing function.

The system is fully closed, so there is no health hazard for the operator and no need to use lower-quality PUR glue.

MEDIA SIZES

Perfect binding mode

Use the Bourg Book Compiler (BBC) to connect the BB3002 perfect binder In-Line behind a printer; or Off-Line/Dual-Mode behind a Bourg Sheet Feeder (BSF) to process jobs from other printers.

The BBC compiles sheets or single fold signatures, coming from the previous devices, and immediately transfers the compiled stack into the book binder. This automated procedure increases your productivity as it eliminates the need for an operator intervention and waiting time.

Fully autonomous In-Line binder, no human intervention

Binder works at constant maximum speed of up to 650 cycles/hour

Advantages of In-Line use

Flexibility to use one print finishing solution for several printers thanks to the BSF (Dual-mode)

Automatic barcode scanning for job tracking and to ensure job cover to content integrity (optional)

Upgrade your BB3002 to a BB3202 with the BBC

Each job is checked in order to avoid reprints; each job is recorded for job tracking; no manual job set-up.

Print to finish on-the-fly for increased productivity without losing book integrity.

Fast compiling book blocks with thickness from 1 to 60 mm (0.04-2.36 in).

Reduce risk of errors and limit human intervention. The operator may work on several production lines while this solution works autonomously.

2

Dual feeding station: flexibility add covers and inserts in the top feeding station

Lower feeding station: compatible with over 30 carts/trolleys

Compressed airflow positioning

Suction belt & air sheet separation technology

Optical Mark Recognition sensors (OMR)

Accuracy adjustments up to 1 mm in increments of 0,02 mm

Jam detection

Ultrasonic Double and Miss Control (DMC)

Automatic purge feature for faulted jobs

Fully supports JDF and XML workflows enabling automated job set-ups

User-friendly Graphical User Interface (GUI) (optional)

Barcode reader capabilities 1D and 2D (optional)

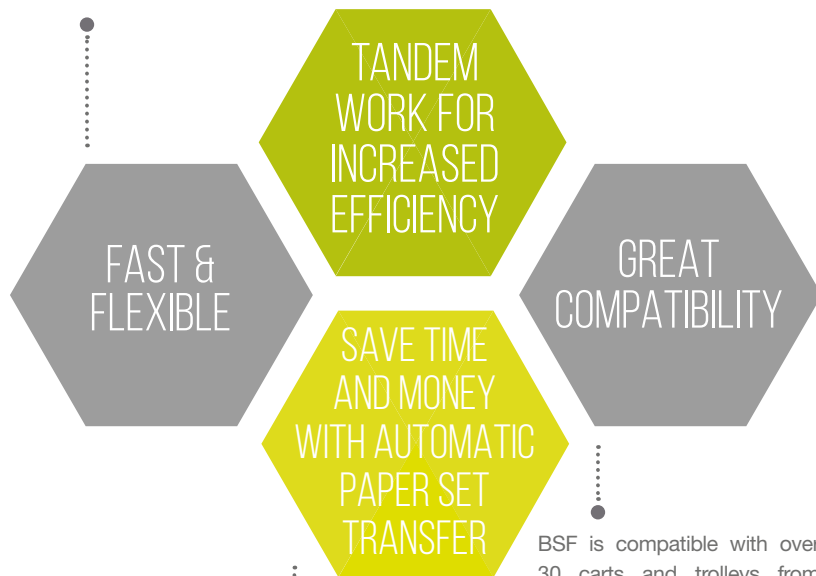

Manual feeding possible and ejection of double feeds (IFB) (optional)

With the Dual-Mode Bourg Sheet Feeder (BSF) you have the advantage of using both Off-Line and In-Line finishing: simply share one finishing device between multiple printers/presses. Switch between the two modes to increase productivity without loss of integrity. This results in increased productivity and reduces the risk of damaged sheets, stacking errors and personal injuries.

The BSF is the only one in its category that is able to feed up to 18,000 sheets/hour and accepts wide range of papers. Combine 3 different modes, depending on your needs (In-Line/Off-Line/Dual-Mode).

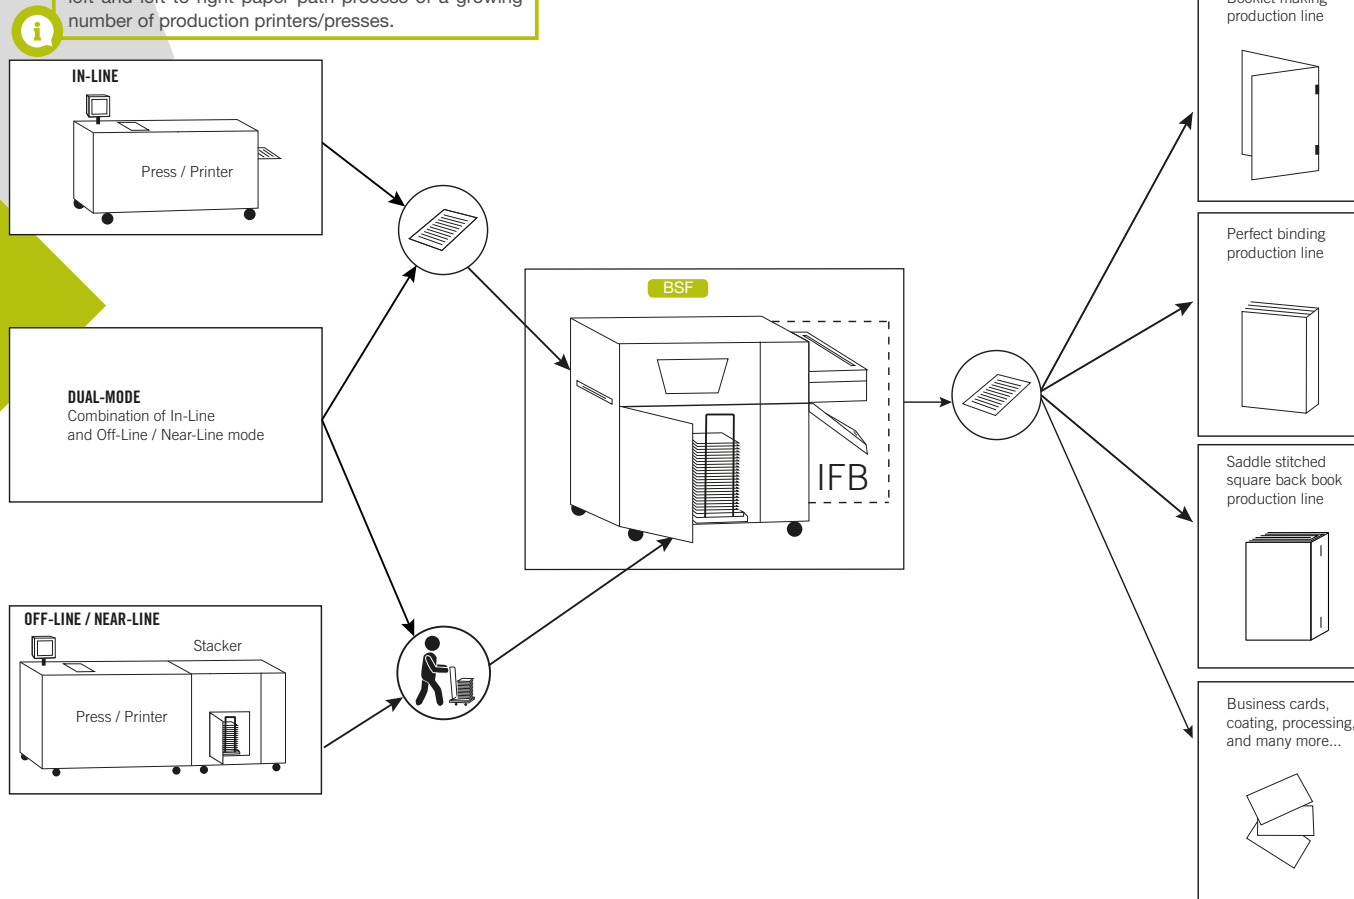

By connecting two BSFs together, your production line is now able to work continuously without interruptions due to paper shortage. Output is uninterrupted and productivity is maintained at 100%.

By automatically transferring print output from different manufacturers' stacker carts into the sheet feeder and centering the stack, the BSF makes it easy for users in on-demand print environments to reap the productivity benefits offered by Off-Line volume finishing. Additionally, the manual top feeding station loads capacity up to 140 mm (5.51 in) of printed, coated or laminated materials.

BSF is compatible with over 30 carts and trolleys from the majority of production printer/presses. BSF is also fully compatible with other C.P. Bourg products, like booklet makers and book binders. Find the full list of compatible C.P. Bourg products in the technical specifications on the back of this sheet and on our website: <https://www.cpbourg.com/bsf>

This is simply the reading direction. **Our solutions are bi-directional.** They work In-Line with the right-to-left and left-to-right paper path process of a growing number of production printers/presses.

CARTS/TROLLEYS FOR THE BSF

CARTS

C.P. BOURG GENERIC CART

Easy manoeuvrable cart : 360°

Sturdy steel long lasting design

We offer over 30 carts and trolleys compatible with various printers/presses and stackers that can easily feed stacks of pre-collated documents (digital color, digital monochrome or from off set presses) in the Bourg Sheet Feeder (BSF).

One C.P. Bourg generic cart is included in our package when investing in a BSF.

Just unload the cart/trolley from your stacker without lifting the paper stack and transfer it into the Bourg Sheet Feeder (BSF) directly. As a result : you save time and there is no risk for your operators health and safety.

- Find the full list of compatible carts/trolleys of the major production printers/presses on the back of this sheet and on our website:

www.cpbourg.com/carts

As the operator does not need to manipulate the stack of paper, it remains perfectly aligned and there is no risk to loose the set integrity.

By connecting two BSFs together, you can load and unload one BSF while the other one is running. Your production line is therefore working continuously without interruptions due to paper shortage. Output is uninterrupted and productivity is maintained at 100%.

BOURG SHEET PREPARATION MODULE

BPM

Automatically transforms SRA3 input to A5/A4 books and booklets

Economies of scale through single-pass production of creative book formats

Increased reliability and full integrity check with optional barcode system in the BSF

Fully supports JDF and XML workflows enabling automated job set-ups

Dynamic cut, fold, bleed and crease of each sheet with very high quality and precision

Eliminates the use of post-processing guillotine trim

On-the-fly waste removal for continuous production

Increase the output speed of your current/future C.P. Bourg print finishing solution

Compatible with all C.P. Bourg booklet making and BB3x02 perfect binding products

Multiple media types for covers, book/booklet content and inserts, can be processed together

The Bourg Sheet Preparation Module (BPM) is a fully automated, modular and scalable sheet preparation unit that vastly simplifies the creation of perfect bound and stitched books and booklets. Connect a BPM to selected digital printers/presses and to a Bourg binder or booklet maker and produce finished products of many different sizes with no operator intervention.

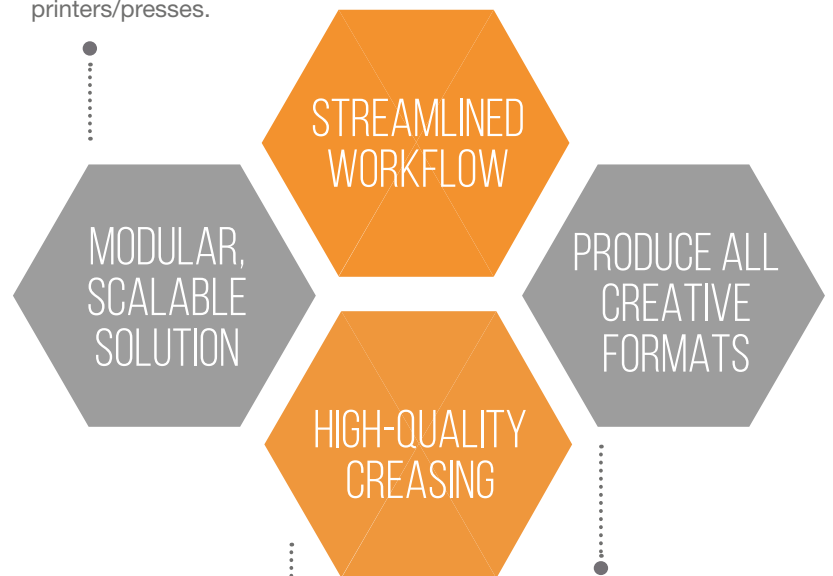

Use a single paper size for any book format: BPM converts sheets from large to small formats in one pass, enabling multiple book or booklet formats from media of a single size. This single-pass conversion process also makes multi-up imposition possible and reducing click charges. Ultimately you deliver higher-quality, more cost-effective books and booklets in shorter turnaround times.

Use a single BPM for 1-up and 2-up jobs, or scale up to 4-up jobs with a second BPM.

The BPM is designed to operate seamlessly with the right-to-left or left-to-right paper path and Duplex 4-up formats of digital printers/presses.

The BPM eliminates or reduces many time consuming, manual processes. The fully automated process maximizes productivity, frees operators for other tasks, and minimizes the risk of human error.

Advanced technology creases sheets on the fly with very high position precision, while the highest quality knife creasing gives the best results without damaging the printed surface.

Innovative bleed trimming system cuts paper on all four edges, trimming symmetrically or asymmetrically from 4 to 100 mm (from 0.16 to 3.94 in) of coated or uncoated sheets.

BOURG WALKOVER BRIDGE

BWO

The Bourg WalkOver bridge (BWO) is a conveyor that connects the Bourg BB3202 binder or the Bourg BM-e booklet maker to production printers/presses.

It is a shortcut for the operator: a quick access from the User Interface of the binder/booklet maker to the one of the printer/press.

Let the Bourg Box included in the BWO do the work for you: instructions for incoming jobs are converted in the pre-press software into an electronic JDF/JMF job ticket. When Print Manager submits the job to the printer, it sends the corresponding JDF/JMF job ticket to the Bourg Box. The Bourg Box then translates those instructions for the connected Bourg finishing modules.

The BWO is compatible with a wide range of Right-to-Left and Left-to-Right paper workflow printers/presses & all Bourg finishing modules. The height of the input module of the BWO adapts to the height of your press/printer.

Find the full list of compatible printers/presses & products on our website:

<https://www.cpbourg.com/bwo>

Increased efficiency: time-saving shortcut for the operator

Maximize throughput and time between the jobs

Minimize potential for errors and waste

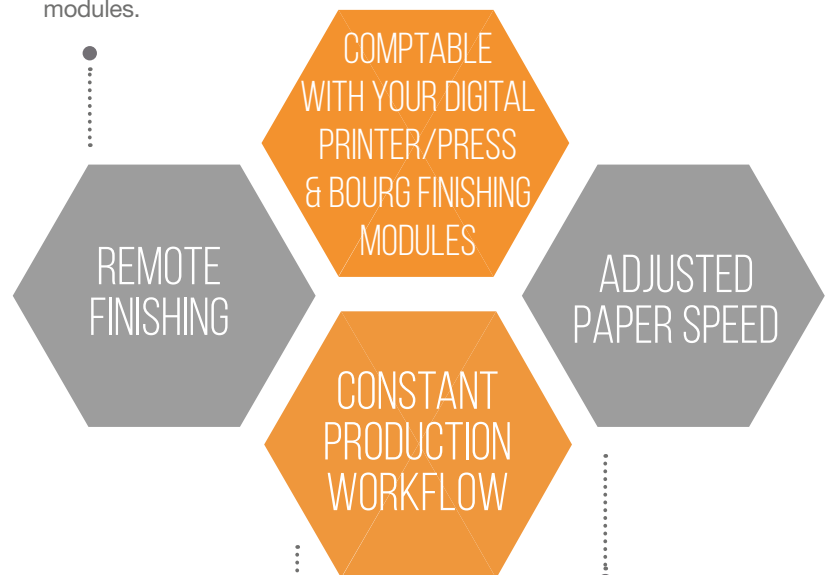

Optimize turnaround time

Compatible with all Bourg finishing modules via the Bourg Sheet Feeder (BSF)

Two-way communication between your printer and Bourg finishing modules with DFA/DFD compliant devices

The integrated reject tray automatically ejected jammed paper to maintain your productivity to 100%.

The BWO matches the paper speed between your printer and C.P. Bourg finishing modules without slowing down the printing speed & performances.

BARCODE UPGRADE FOR THE BSF

Automatic job integrity check

Automatic job set-up on finishing device through JDF or pre-saved jobs (on selected finishers only)

Real-time statistics

Hand-held external barcode reader or integrated barcode reader in BSF

BARCODE UPGRADE FOR THE BB3X02 & THE CMT PRODUCT FAMILIES

Automatic job integrity check on BB3x02

CMT knife trimming family job selection/set-up from barcode on cover (no manual job set-up required)

Real-time statistics

C.P. Bourg's products can be equipped with two types of barcodes allowing you to achieve record breaking efficiency:

1. The latest 1D and 2D barcode reader technology. It can be equipped on the BSF and includes a hand-held external or integrated system.
2. The latest integrated barcode reading technology. It can be equipped on the BB3002 perfect binding family and the CMT knife trimming family.

The incorporated 1D and 2D barcode reader technology in your BSF provides automatic job set-up on finishing device through JDF or pre-saved jobs (on selected finishers only, visit our website for more information). Each page is scanned guaranteeing a complete job and a systematic traceability. You save time configuring/processing variable data jobs. In case of a faulted job, the job can be easily reprinted.

- The barcode upgrade for the BB3x02 perfect binding family and the CMT knife trimming family offers cover to content matching to ensure your production's job integrity. No manual job set-up is required since the system is integrated in the machine.

The barcode upgrade system for the BSF offers you the possibility to either let the system scanning each page to check for set integrity and/or automate the job set-up through a barcode identifying job ID. This can be performed with the hand-held external barcode reader or internal reader.

Follow your production with real-time statistics with both type of barcode upgrade systems.

ULTIMATE TECHNOGRAPHICS IMPOSITION & FINISHING AUTOMATION

SOFTWARE

AUTOMATE IMPOSITION SOFTWARE: ULTIMATE IMPOSTRIP® AUTOMATION

Generate job ticket sheets and dynamic barcodes for advanced job tracking and job integrity

Connect & integrate any upstream system using JDF/XML to automate printing and finishing processes

Save your template information and preference to your hot folder. It then creates as many plates or sheets needed to complete the job

ADVANCED IMPOSITION SOFTWARE: ULTIMATE IMPOSTRIP® SCALABLE

Reach high speed imposition process and group jobs of different quantities and sizes

FULL AUTOMATION SOFTWARE: ULTIMATE BINDERY®

Validate jobs for C.P. Bourg finishing devices to avoid the creation of impossible jobs and waste

Reduce repetitive manual set-ups, reduce errors, and increase the number of jobs you get done in a day.

Enhance C.P. Bourg's print finishing solutions with Ultimate TechnoGraphics finishing workflow solutions to increase the productivity on each job.

By combining Ultimate Impostrip® Automation or Scalable and Ultimate Bindery®, the C.P. Bourg device will read the job barcode, adjust job set-up automatically, check the job integrity and produce all jobs within the full stack of variable short run jobs without manual intervention.

This is the best way to create a fully automated pre-press to finishing workflow to dynamically drive on demand book or booklet of one.

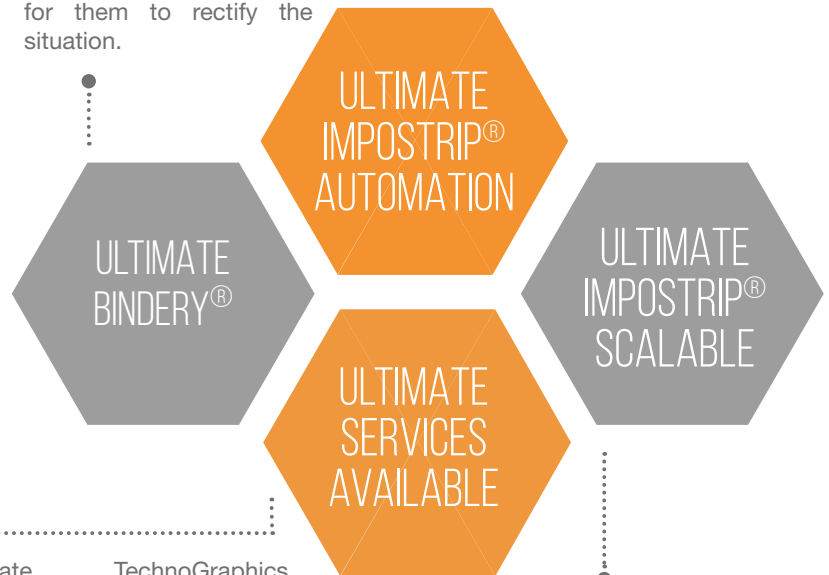

Combine Ultimate Bindery® with Ultimate Impostrip® Automation or Scalable for a full JDF/JMF imposition and finishing automation workflow solution.

It operates as a central location to validate that each job is built respecting the capabilities and constraints of the selected finishing equipment. These validations prevent errors and reduce waste since an alert is sent to the user for them to rectify the situation.

● In a very little time, set up a link to your management system (MIS), your online photo editing system workflow or web ordering system. Perfect for very short turnaround delivery on marketing campaigns, transactional and short run of books and booklets.

Use this software to create dynamic barcodes to automate press imposition and finishing processes and eliminate manual make-ready.

With the AUTOMATIC LAYOUT SELECTOR, Ultimate Impostrip® provides an Agent choosing the best set up for your job, managing many impositions with a single point of entry.

● Ultimate TechnoGraphics solutions are designed to maximize C.P. Bourg devices flexibility and feature set. You may also get custom functionalities for your specific needs, technical services and personalized training.

● Ultimate Impostrip® Scalable is designed to resolve the growing bottleneck in imposition due to increasing job sizes and number of short runs that must be printed in a very quick turnaround time. It provides the prepress processing speed and scalability needed to print high volume of books and booklets.

TECHNICAL SPECIFICATIONS

Connectability for the barcode imposition software

Compatible with any finishing equipment and can be integrated with any PDF workflow

Maximize throughput and time between the jobs

Minimize potential for human errors and waste

Optimize turnaround time

Provides In-Line communication such as DFA/JDF/XML enabling automated job set-ups

The Bourg Box acts as a protocol converter, through which C.P. Bourg products communicate with virtually any type of digital printer through electronic job tickets.

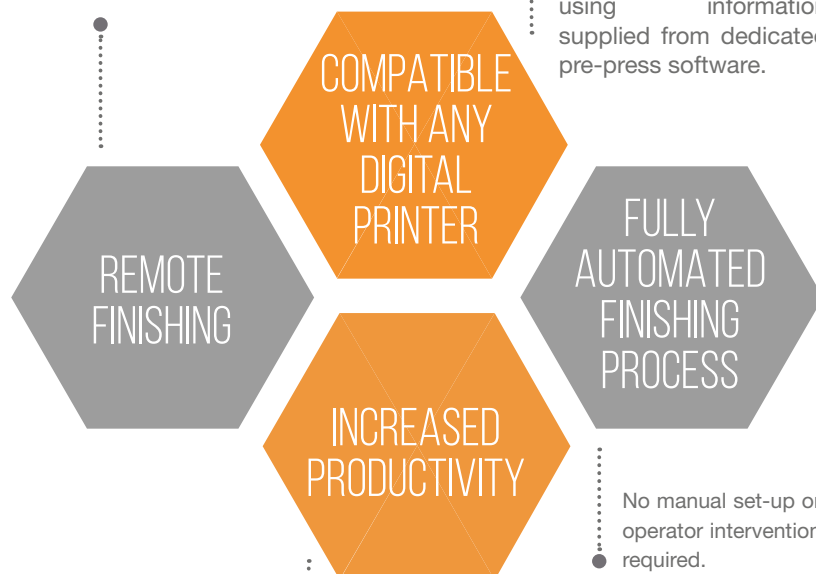

The job tickets come in two standard formats, JDF and JMF, and are initially generated automatically by a customer's electronic order for print services.

The automated communication synchronises production instructions, prevents production of «impossible jobs» and handles automatic document size changeovers to accommodate, with peak efficiency, any type of job in the production system. The result is a touchless Web-to-Finish workflow.

Let the Bourg Box do the work for you: instructions for incoming jobs are converted in the pre-press software into an electronic JDF job ticket. When the Print Manager submits the job to the printer, it sends the corresponding JDF job ticket to the Bourg Box. The Bourg Box then translates those instructions for the connected Bourg finishing modules.

- Connect Bourg Box In-Line with a printer and/or C.P. Bourg finishing equipment to have fully automated finishing during job production using information supplied from dedicated pre-press software.

During job set-up all mechanical functions are automatically adjusted to accommodate the specified sheet size, bleed trim, crease dimensions, number of sheets, stitch position, as well as fold and trim dimensions without operator involvement. The Bourg Box also notifies the printer when a job is about to be finished, so that instructions for the next print job are sent on time.

BOURG INTERFACE FEEDER BOOKLET MAKER & PERFECT BINDER

IFB

Minimal time lost & waste to faulted jobs

Enables manual feeding of faulted jobs

Connectable to all our booklet makers, perfect binders and selected finishing partner products

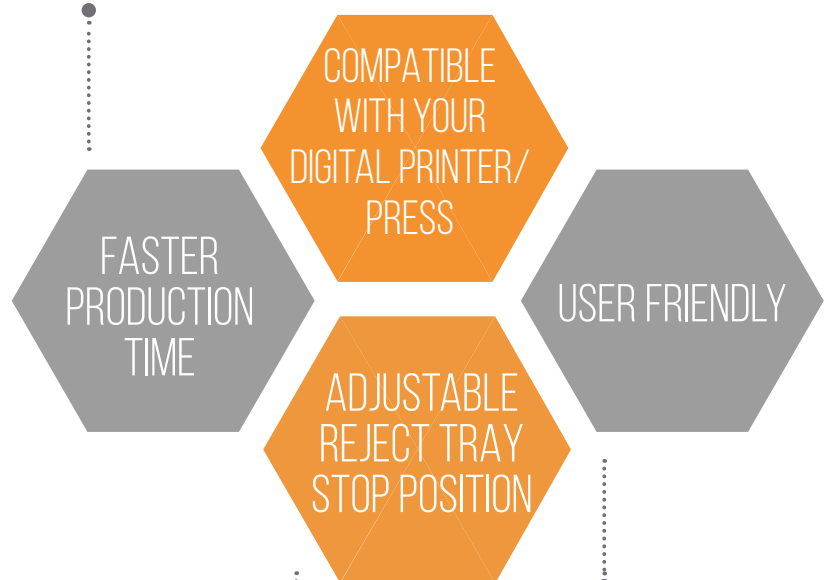

The Bourg Interface Feeder Booklet Maker & Perfect Binder (IFB) serves an error reject station. It is a recommended accessory to connect the Bourg Sheet Feeder (BSF) to any Bourg booklet making and perfect binding modules: the Bourg Document Finisher (BDF-e), the Bourg Bleed Crease Module (BCM-e), the Bourg Booklet Maker (BM-e) and the Bourg Binder BB3202 EVA / hot melt / PUR-Compact.

The IFB can also be connected to several validated downstream finishing partner products.

The IFB automatically ejects jobs in case of a double feed or a wrong barcode sequence. Once the operator corrected the issue with the faulty job, it can be manually fed back through the IFB. As a result, the IFB minimizes the downtime and waste associated with faulted jobs.

The paper-path can follow either a right to left or a left to right process, and work In-Line with multiple digital printers/presses. Find the full list of compatible printers/presses & products on our website: <https://www.cpbourg.com/ifb>

You may adjust or remove the magnetic reject tray stop position depending on paper format.

Easy maintenance and jam removal. Only the good documents go through.

TECHNICAL SPECIFICATIONS

Media

Paper weight	60 to 350 gsm
Min paper size	203,2 x 120 mm (8.00 x 4.72 in)
Max paper size	660,4 x 364 mm (26.00 x 14.33 in)

Physical

Dimensions (L x W x H)	61,5 x 58,2 x 93 cm (24.21 x 22.91 x 36.61 in)
Weight	21 kg (46.29 lbs)

Robotized book repositioning for three-sides cut

Maximum speed in multiple book mode of up to 500 books/hour

Stack up to three books per cutting cycle

Hydraulic clamping and cutting action: cut through books up to 50,8 mm (2.00 in) thick

Precision knife depth control: full control of knife stroke depth, reduces wear to cut sticks and the need for continued knife adjustments

Operational simplicity: smart self-diagnostic assistances and error-indication

Variable mode data entry with up to 99 jobs stored in memory

Sturdy steel and cast-iron long lasting design

No tools are required to perform manual adjustments or exchange book clamps

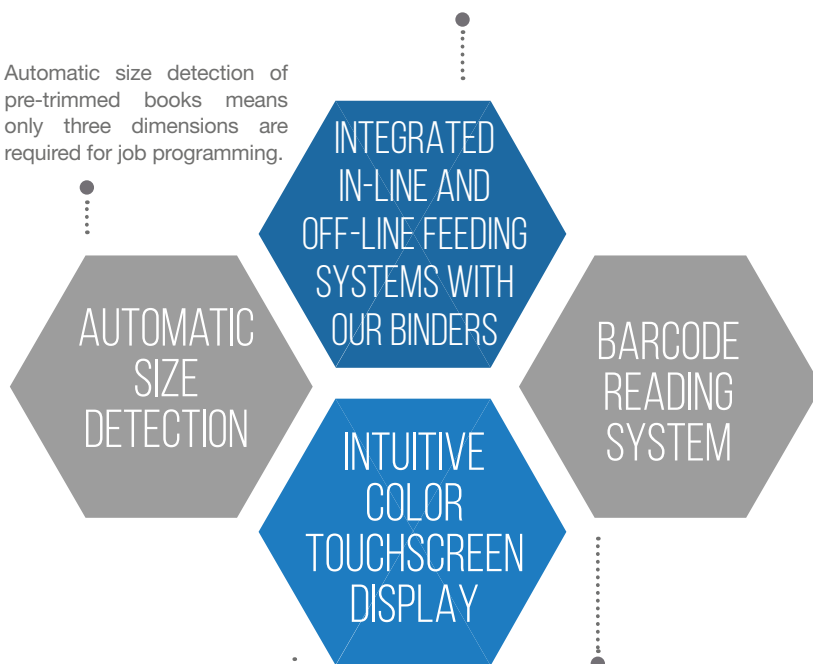

The CMT-130TC is a hydraulic single-knife book trimmer with robotized book rotation that provides the same functionality as a three-knife trimmer but at lower cost and with consistent product quality.

This fully automated three-side book trimmer finishing solution is designed for on-demand and short-run digitally printed perfect-bound books. It is capable of fulfilling a combination of both Off-Line and In-Line feeding systems with the Bourg Binder BB3x02 family.

With the proper configuration of feeding components, the CMT-130TC is capable of automatically switching, as needed, between feeding books directly from an attached Bourg Binder BB3x02 OR from a manually loaded Off-Line book pile feeder system. If one system is waiting for its next book, the other system can feed the trimmer to maximize production throughput.

Automatic size detection of pre-trimmed books means only three dimensions are required for job programming.

Intuitive 10.5" (26,7 cm) color touchscreen display provides a clear & easy-to-read image of the trimming system. Automatic starting book size detection simplifies the required job parameters making job entry quick and easy. Follow each book as it travels through the system on live graphical display,

Integrated barcode reading system's 1D/2D enables true fully-automated book-of-one production by automating job set-up.

THREE-KNIFE TRIMMER CMT330-TC

TRIMMER

CMT-330TC

Three-knife trimming process

Stacks up to three books per cutting cycle

Powerful hydraulic cutting and clamping pressure to effortlessly cut books from 2,5 mm (0.1 in) up to 50,8 mm (2.00 in)

Operational simplicity: smart self-diagnostic assistances and error-indication

Fast and accurate book size changes set-ups in under six seconds (no tools required)

Precision knife depth control: full control of knife stroke depth, reduces wear to cut sticks and the need for continued knife adjustments

Better waste management

Variable mode data entry with up to 99 jobs stored in memory

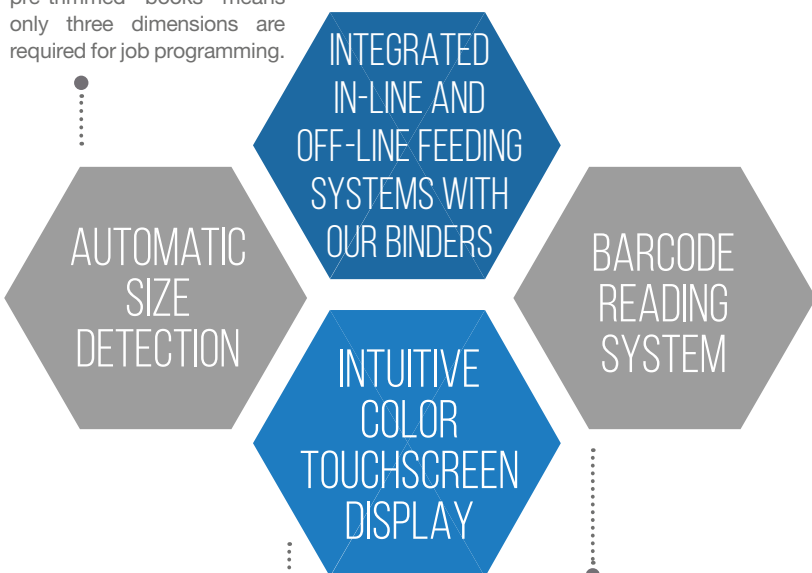

The new generation of CMT-330TC three-knife trimmer introduces all the flexibility necessary to the book trimming operation in today's publishing marketplace. It is now capable of fulfilling a combination of both Off-Line and In-Line feeding systems with the Bourg Binder BB3x02 family to provide the final touch on your perfect bound books.

The CMT-330TC has also expanded its capabilities: trim landscape formatted books such as photo books (up to 307 x 328 mm – 12.1 x 12.9 in) is one example out of many.

With the proper configuration of feeding components, the CMT-330TC is capable of automatically switching, as needed, between feeding books directly from an attached Bourg Binder BB3x02 OR from a manually loaded Off-Line book pile feeder system. If one system is waiting for its next book, the other system can feed the trimmer to maximize production throughput.

Automatic size detection of pre-trimmed books means only three dimensions are required for job programming.

Intuitive 10.5" (26,7 cm) color touchscreen display provides a clear & easy-to-read image of the trimming system. Automatic starting book size detection simplifies the required job parameters making job entry quick and easy. Follow each book as it travels through the system on live graphical display,

Integrated barcode reading system's 1D/2D enables true fully-automated book-of-one production by automating job set-up.
